

## Course Information Letter ---- CT567

### (GE FRAME 5, 6, & 7) GAS TURBINE MAINTENANCE CT567

This 4.5 day course was developed to improve the effectiveness of maintenance activities associated with the GE Frame 5, 6 & 7 gas turbines. First we need to learn to properly identify all the major components and systems. An overview of the identification of this equipment is offered in advance of the more detailed lectures to follow. Next, we need to learn to better plan and implement gas turbine maintenance outages. Planning, safety, procedures and considerations regarding replace/reuse/repair decision-making are very important topics covered. We examine the most common causes of gas path damage and the impact upon efficiency, reliability and availability. Related topics include clearance data taking, NDE, bearing inspections, and alignment issues. Combustion, hot gas path and major inspections are discussed as they apply to each of the individual frame types.

**A topical outline includes:** Overview of Gas Turbine Fundamentals (a chance to ask basic questions), Construction Principles (including differences between Frame types), Maintenance Preparation and Planning, Combustion Section Inspection (for each frame type), Turbine Inspection (for each frame type), Major Inspection (for each frame type).

This course has been specifically designed for plant personnel who are involved in safely and effectively maintaining these GE Frame 5, 6 & 7 gas turbines.

**OBJECTIVES:** Upon successful completion of this course the participant should be able to:

1. Describe the major components and systems associated with each of the selected gas turbines.
2. Describe differences between a hot gas path inspection, turbine inspection, and major inspection.
3. Describe the major considerations when making a replace/reuse/repair decision.
4. Describe the procedures necessary for the safe and effective disassembly and reassembly of gas turbine components.
5. Describe the disassembly and reassembly of the major fuel valves.
6. List the most common causes of gas path damage and their possible affects upon future operation.
7. Describe most common causes gas path defects and their impact upon turbine efficiency and reliability.
8. Describe the type and purpose of clearance and alignment measurements commonly taken during the disassembly and reassembly of a gas turbine unit.
9. Describe the measuring instruments used to determine gas turbine component clearances.
10. List and describe the various non-destructive examinations performed during disassembly of the gas turbine.
11. Describe the common procedures for cleaning and inspecting gas turbine components.
12. Describe the criteria used to evaluate gas turbine component defects.
13. Describe the common repair methods for repair of gas turbine components.
14. Describe the common types and operation of journal and thrust bearings.
15. Describe the common causes of bearing damage.
16. Describe the measurements required to determine oil clearances.
17. Describe common bearing inspection and repair procedures.
18. Describe the considerations to be taken into account when evaluating alignment of gas turbine components.

## COURSE DATES/LOCATION/FEE

For current dates / locations / prices, please see HPC's website, [www.hpcnet.com](http://www.hpcnet.com).

## FREQUENTLY ASKED QUESTIONS

- Will HPC Technical Services bring this course to our location for our personnel only? YES, call or email Stephen Parker, [stparker@hpcnet.com](mailto:stparker@hpcnet.com) for a price quotation.
- Will HPC Technical Services customize the presentation at our site to suit our particular needs? Yes.
- Is HPC Technical Services' textbook available for purchase as a reference document? Yes, \$239.
- What is the cost for HPC Technical Service to deliver this course at our location? Well, of course that can vary, but generally speaking, if you're planning on having 6+ attend, when considering your T&L, it may be to your advantage to perform the course at your plant (office). You gain from the customization and price.
- Can HPC Technical Services provide "Technical Assistance" in outage planning, implementation or troubleshooting? Yes we can. Call or contact Harold Parker, [hparker@hpcnet.com](mailto:hparker@hpcnet.com) for our rate sheets and any further information required.

## COURSE OUTLINE

### I. Overview of Gas Turbine Functions

### II. Gas Turbine Construction

- A. Turbine Function
  - 1. Overall
  - 2. Frame 5
  - 3. Frame 6
  - 4. Frame 7

} Typical of all topic outlines

### B. Component Description

### III. Maintenance Preparation & Planning

- A. Periodic Inspections
- B. Running Inspections
- C. Combustion Section Inspection
- D. Turbine Inspection
- E. Major Inspection
- F. Documentation
- G. Scheduling

### IV. Combustion Section Inspection (5, 6, & 7)

- A. Accessibility
- B. Parts Identification
- C. Ignition and Flame Detection
- D. Combustion Components
- E. Borescope Inspection
- F. Reassembly

### V. Turbine Inspection (Frame 5, 6 & 7)

- A. Accessibility
- B. Turbine Shell Disassembly
- C. Nozzle Disassembly
- D. Inspection
- E. Reassembly

### VI. Major Inspection (Frame 5, 6 & 7)

- A. Accessibility
- B. Disassembly
- C. Bearings
- D. Rotor
- E. Compressor Stator
- F. Reassembly

## GAS TURBINE CERTIFICATION:

Those who attend this course are automatically qualified to take HPC Technical Services' Certification Examination. This examination is offered at no additional expense to the participant. An 80% passing grade is required. The examination length will not exceed 2-hours. Those who complete this examination will receive a revised "certificate of completion" that recognizes this accomplishment along with two-copies of a "To Whom It May Concern" letter that states their accomplishment. (Two copies are provided, one for the participants' employer and one for the participants' personal file.)

Consult HPC's website, [www.hpcnet.com](http://www.hpcnet.com), for detail on HPC gas turbine certification program.

## WHAT YOU WILL RECEIVE:

1. 1 copy of HPC Technical Services' textbook, Gas Turbine (GE Frame 5, 6, & 7) Maintenance.
2. A "Certificate of Completion" with 2.3 CEUs, authorized for issue by the International Associate of Continuing Education/Training.

## ASSOCIATE INSTRUCTOR(S):

**Eldon Bearden** Mr. Bearden has 21 years experience in the power generation industry, 10 of them with GE. He started his career as a GE field engineer providing technical services for installations and maintenance (1976-1981 and 2000-2004). Here he was responsible for the installation and startup of a number of large steam turbine-generators and frame 7 gas turbines as well. In addition to the installation work, he also performed maintenance service on a variety of fossil, nuclear and combined cycle sites.

**Len Berube** is a power technology engineer with diverse field experience in power plant application, construction, retrofit upgrades, and relocation of thermal power generation equipment. Proven consulting expertise in combustion turbine risk assessments, life-cycle evaluations, and appraisal of power generating equipment. Management skills include power plant engineering, operation and maintenance planning, life extension refurbishment engineering, and evaluation of long-term service agreements (LTSA's). Technically focused on domestic and international power plant initiatives incorporating life-extension retrofit upgrades and reapplication of refurbished power turbines. Multi-lingual; with international field service and project management experience in steam and gas turbine power generation technology, life extension upgrades, and capital asset renovation projects.

**Brendan Bennett** has over 20 years hands on experience in all areas of power generation as a field engineer, generator specialist, and project manager. His employment history includes General Electric, Trans Alta Utilities and Manitoba Hydro. At General Electric, he provided technical direction on the repair and overhaul of gas turbines, steam turbines and generators, including generator rewinds ranging in size of 30 to 1200 megawatts. His experience includes GE Frame 5, 6, 7 and 9 gas turbines, D-11 steam turbines, and Alstom and Hitachi generators. As a project manager at Trans Alta, he was responsible for managing capital projects for three large thermal generating stations. This included tracking costs, developing and monitoring work progress and coordination of schedule conflicts. He has also performed risk analysis and investigated equipment performance issues.

**Sal Paolucci** has over 28 years of, (GE frame 3, 5, 6, & 7) Gas Turbine Operation, Maintenance, Installation, Start-up, and troubleshooting Gas Turbine Controls; MK2, MK4, & MK5. 10 years of experience in Combine Cycle Plant, Outage Planning, Plant Spare parts, and Plant Performance (Heat Rate). BSME Cleveland State University, Cleveland OH. Career includes approximately 15-years as a GE field engineer servicing clientele in the USA as well as internationally. He also worked for 10-years (5 in operations and 5 in maintenance) for Mass Power, in Massachusetts. He currently resides in the Boston MA area.
